

Student Class Purchase & Enrollment Workflow

This document outlines the typical flow a student follows when purchasing or enrolling in a class through SkillBridge.

1. Discover Classes

- Browse `/classes` on the main website or homepage.
- Filter by category, level, instructor and price.
- Logged-in users can add classes to their wishlist.
- Open a class to view details via `/classes/[id]`.

2. View Class Details

A class detail page displays:

- Full description and instructor bio.
- Curriculum and lessons list.
- Student reviews and requirements.
- Schedule information (online or offline).

Actions available:

- **Add to Cart** if the class is paid.
- **Enroll Directly** if the class is free.

3. Cart System

On `/cart` students can review selected classes:

- See title, price and instructor information.
- Remove classes if needed.
- View the total price and proceed to checkout.

4. Checkout

The `/checkout` page requires the student to be logged in. A completed profile may also be required. Students select a payment method, confirm billing details and review their order summary before proceeding.

5. Payment Gateway

Students are redirected to the configured payment processor (Stripe, Tap, PayPal or an NFT wallet). On successful payment they return to `/checkout/success` where the order is saved and the student is officially enrolled. Failures redirect to `/checkout/failure` with options to retry or contact support.

For card payments, the checkout uses Stripe Elements to tokenize sensitive details in the browser. Only the tokenized payment identifier is sent to our server, keeping raw card numbers out of the application.

If paying via bank transfer or another offline method, students may need to upload a payment receipt. Accepted formats are JPG, PNG or PDF files up to 5 MB.

Installment Payments for Online Classes

- Installments are available only for online classes where the instructor enabled the option.
- Checkout automatically splits the class price into two equal payments; the first installment is charged immediately.
- The second installment becomes due halfway through the class schedule (minimum reminder gap of 7 days, default 14 if no schedule is provided).
- Students, instructors and administrators receive a notification on the due date so the remaining payment can be collected.

- Subsequent installment payments reuse the standard checkout flow once the reminder is received.

6. Order & Invoicing

- Administrators can view orders under `/dashboard/admin/orders` .
- Students can download invoices from `/dashboard/student/invoices` .
- Email confirmations and receipts are automatically sent.
- Instructors may be notified of new students.

7. Student Class Access

Once payment is confirmed, students appear in the class's roster and gain access to:

- The classroom page `/dashboard/student/classes/[id]` .
- Lessons, resources and assignments.
- Certificate eligibility when applicable.

Optional enhancements include guest checkout, coupon codes, a wallet/credits system and automated reminders for upcoming classes.
